A COMPREHENSIVE STUDY OF METEOROLOGY AND CLIMATOLOGY The atmosphere is a complex medium, and its mechanism and process are sometimes very complicated. Its nature however is generally expressed in terms of only a few variables, which are measurable. The data thus recorded provides the raw materials for understanding both temporary (weather) and long term (climate) atmospheric conditions. The variables can be through of as the elements of weather and climate. The most important are: temperature content, pressure and wind. These are the basic ingredients of weather and climate. Measuring how they vary in time and space makes it possible to decipher at least partly the complexities of weather dynamics and climatic patterns. Variation in the climatic elements is frequent, if not continuous over Earth. Such variations are caused by, or at least strongly influenced by certain semi permanent attributes of our planet, which are often referred to as controls. The physical conditions and processes are constantly taking place in the atmosphere and they are subjected to periodic changes over time. The atmosphere reacts by producing an infinitive...
